Professional Summary

Software Engineer with 3+ years on .NET Core / Web API backends and Angular front ends, plus hands-on work with AI-assisted, real-time systems and an Azure AI-200 certification. Shipped 20+ API endpoints, cut data retrieval time 30%, and held 90%+ test coverage in CI/CD.

Technical Skills

Languages: C#, SQL, JavaScript, TypeScript, Python

Frameworks & Patterns: ASP.NET MVC, .NET Web API, RESTful APIs, Clean Architecture

Technologies: .NET, .NET Core, Angular, Microsoft SQL Server, PostgreSQL, Redis, Docker, Azure, Version Control

Certifications: Microsoft Certified: Azure AI-200

Education

Graphic Era Hill University — Bachelor of Technology in Computer Science

October 2020 – July 2024

Experience

Software Engineer — Covalience, Mohali

January 2024 – Present

Member Tool and Management System (.NET Web API, Angular)

- Built 20+ RESTful .NET Web API endpoints, improving reliability and scalability.
- Held 90%+ NUnit coverage inside CI/CD pipelines, strengthening code quality and lowering bug rates.

Cross-Platform Mobile App (.NET MAUI)

- Automated staging/production deployments via CI/CD pipelines, cutting release time by 60%.
- Implemented 10+ custom handlers/validation services, streamlining cross-platform delivery.

Software Engineer Intern — Covalience, Mohali

July 2023 – December 2023

Data Integration Migration — Zoho to Monday.com

- Built middleware connecting Zoho and Monday.com via webhooks/API calls, automating recruitment workflows.
- Applied FluentValidation and Clean Architecture, improving maintainability and cutting technical debt.

Data Migration System (ASP.NET MVC)

- Migrated and validated 50,000+ member records from legacy systems with minimal downtime.
- Used FluentValidation and NUnit to reach 98%+ data accuracy post-migration.

Projects

SelfForge — Self-Hosted Infrastructure-as-Code Platform

- Built a self-hosted platform as infrastructure-as-code, covering networking, orchestration, monitoring, and backups.
- Provisioned services with Ansible and k3s, managed config with Kustomize, and secured access with Vault and Cloudflare.

APORIA — Real-Time Social Music Platform (In Development)

- Designing a real-time social music platform with synced lyrics, audience interaction, and AI-assisted analysis.
- Building frontend in Next.js/React and backend in ASP.NET Core/SignalR, with PostgreSQL, Redis, and Python RAG/LLM services.

Achievements

- Led a hackathon team from ideation through development and final presentation, placing runner-up.
- Contributed to developing and implementing solutions at Covalience's AI Automated SDLC Hackathon (Jul 2026).
