Professional Summary

Software Engineer with 3+ years building production .NET Core / ASP.NET Web API backends and Angular front ends, plus a cross-platform .NET MAUI app. Shipped 20+ backend API endpoints, cut data retrieval time 30% by optimizing SQL Server stored procedures, and held 90%+ unit test coverage with NUnit inside CI/CD pipelines.

Technical Skills

Languages: C#, SQL, JavaScript, TypeScript, XAML, Python

Frameworks & Patterns: ASP.NET MVC, .NET Web API, RESTful APIs, MVVM (MAUI), Clean Architecture

Technologies: .NET, .NET Core, Angular, Microsoft SQL Server, SQLite, PostgreSQL, Redis, Docker, Ansible, k3s, Prometheus, Grafana, Version Control

Certifications: Microsoft Certified: Azure AI-200 | Angular (Udemy) | .NET MAUI (Udemy)

Education

Graphic Era Hill University — Bachelor of Technology in Computer Science (*October 2020 – July 2024*)

Experience

Software Engineer — Covalience, Mohali

January 2024 – Present

Member Tool and Management System (.NET Web API, Angular)

- Built 20+ RESTful backend endpoints with .NET Web API, improving system reliability and scalability.
- Optimized SQL Server stored procedures, cutting data retrieval time by 30%.
- Delivered responsive Angular UI components, increasing front-end performance and user engagement.
- Reached 90%+ unit test coverage with NUnit, strengthening CI/CD pipelines and lowering bug rates.

Cross-Platform Mobile App — GideonNow (.NET MAUI)

- Implemented 10+ custom handlers and validation services in .NET MAUI, streamlining UX across iOS and Android.
- Integrated native OS features (camera, local storage, notifications), expanding app functionality.
- Automated staging and production deployments with CI/CD pipelines and Firebase App Distribution, cutting release time by 60%.

Software Engineer Intern — Covalience, Mohali

July 2023 – December 2023

Data Integration Migration — Zoho to Monday.com

- Built a middleware system connecting Zoho and Monday.com via webhooks and multi-level API calls, automating recruitment workflows.
- Applied FluentValidation and Clean Architecture principles, improving code maintainability and reducing long-term technical debt.

Data Migration System (ASP.NET MVC)

- Migrated and validated 50,000+ member records from legacy systems with minimal downtime.
 - Used FluentValidation and NUnit to reach 98%+ data accuracy and system stability post-migration.
 - Automated report generation with iTextSharp, improving audit reporting efficiency by 60%.
-

Projects

SelfForge — Self-Hosted Infrastructure-as-Code Platform

- Built a self-hosted server platform end-to-end as infrastructure-as-code, covering networking, container orchestration, monitoring, logging, storage, secrets, and backups.
- Provisioned and orchestrated services with Ansible and k3s, and managed configuration with Kustomize, enabling reproducible, automated deployments.
- Set up monitoring and logging with Prometheus, Grafana, and Loki, and secured secrets and network access with Vault and Cloudflare, improving system observability and recovery.

APORIA — Real-Time Social Music Platform (*In Development*)

- Designing a real-time social music platform with synchronized lyrics, audience interaction, and AI-assisted literary/emotional analysis.
- Building the frontend with Next.js and React, and the backend with ASP.NET Core and SignalR for live, synchronized sessions.
- Architecting data and state management with PostgreSQL, Redis, and pgvector, alongside Python-based RAG/LLM services for grounded thematic analysis.
